

Le genre fauveliopsis (polychète sédentaire) en Méditerranée

Four species of the genus *Fauveliopsis* are described or revised: *F. brevis* (HARTMAN, 1965) *F. adriatica* sp.n., *F. fauchaldi* sp.n., and one form that is closely related to *F. adriatica*. HARTMAN (1971) stated the genus only for the deep sea, but this study makes sure that *Fauveliopsis* species are also inhabiting shallow regions of the sea: *F. adriatica* was found in a depth of 60 m. A complete dichotomous key of all hitherto known species of the genus *Fauveliopsis* concludes this paper. [NOT CONTROLLED OCR]
